FORECASTING

PRINCIPLES AND PRACTICE

A comprehensive introduction to the latest forecasting methods using R. Learn to improve your forecast accuracy using dozens of real data examples.

3RD EDITION

OPEN TEXTS FOR PRACTICE

2. Time series graphics

2.4 Seasonal plots

OTexts.org/fpp3/

Reminder: a10 time plot

```
a10 |>  
  autoplot(Cost)
```

Seasonal plots

```
a10 |> gg_season(Cost, labels = "both") +  
  labs(y = "$ million", title = "Seasonal plot: antidiabetic drug sales")
```

Seasonal plots

- Data plotted against the individual “seasons” in which the data were observed. (In this case a “season” is a month.)
- Something like a time plot except that the data from each season are overlapped.
- Enables the underlying seasonal pattern to be seen more clearly, and also allows any substantial departures from the seasonal pattern to be easily identified.
- In R: `gg_season()`

Quarterly Australian Beer Production

```
beer <- aus_production |>  
  select(Quarter, Beer) |> filter(year(Quarter) >= 1992)  
beer |> autoplot(Beer) +  
  labs(title = "Australian beer production", y = "Megalitres")
```

Quarterly Australian Beer Production

```
beer |> autoplot(Beer) + geom_point() +  
  labs(title = "Australian beer production", y = "Megalitres")
```

Quarterly Australian Beer Production

```
beer |> gg_season(Beer, labels = "right")
```

Multiple seasonal periods

```
vic_elec
```

```
